

VS Recorder

Convenience without the Cost

Dictate from any phone

anywhere

anytime

Key Features

- Convenience of call-in dictation without a costly server
- Create custom user profiles to fit the different needs of each user
- Quickly find dictation with custom search filters
- Check the status of a channel with the Activity Monitor

Now anyone can enjoy this convenience at an exceptionally affordable price. Up to four telephony channels can be ran off of a user's existing PC, via a USB port.

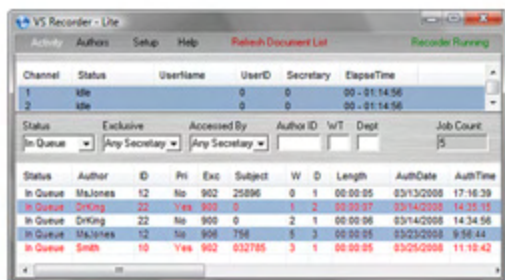

Simple, versatile, and affordable.

Station

Landline

Cell

How does the VS Recorder work specifically? Having plugged up to four telephone lines into the VS Recorder's external voice card, a USB cable connects to the desired host PC. The user interface software is loaded and after a few, brief configuration settings are made, the user may begin dictating from any landline or mobile phone. Direct-wired dictate stations may also be used. The dictation is now ready for transcription!

The VS Recorder's interface allows vast customization to suit each user's needs. Using different user profiles you can configure over a dozen different settings. In addition, each phoneline has an array of preferences you can adjust according to your needs.
